WHEAT

ANALYSIS

For the week, Chicago wheat closed \$.15 1/2 higher; Kansas City wheat closed \$.14 1/4 higher and Minneapolis wheat \$.00 1/4 higher. Last week, private exporters did not report any sales.

Weekly export sales for all wheat showed a total of 18.1. This was above the 11.2 mb (306,100 mt) needed to stay on pace with USDA's May demand projection of 780 mb. The weekly crop progress report showed winter wheat is now 84% headed and g/e ratings improved 1% last week to 63% g/e. Last year's rating was 44%. Spring wheat conditions improved 3% last week to 79% g/e and are now above last year's 71% rating. The month of June brings the end to the growing season for the winter wheat crop, as harvest will progress quickly from Texas northward. The spring wheat crop, traded on the Minneapolis Grain Exchange, will move from a followers role to a leader as it is the beginning of the spring wheat growing season. The USDA will update early yield results in the June crop report. The USDA will also update world wheat production and ending stocks, which are growing. The world should be aggressive buyers of newly harvested U.S. wheat in the last half of the month. After the USDA supply/demand report on June 10, the market will be trading harvest results and weather in the spring wheat belt. The next fundamental price determinant for spring wheat will be weather in the spring wheat belt as a hot and dry summer will force price rationing as the supply side of the wheat will again be threatened.

STRATEGY & OUTLOOK

The downside should be limited for prices until winter wheat harvest advances.

Midwest Market Solutions does not necessarily take every trade recommendation listed herein. Hypothetical performance results have many inherent limitations, some of which are described below. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown in fact there are frequently sharp differences between hypothetical performance results and the actual results subsequently achieved by any particular trading program. One of the limitations of hypothetical performance results is that they are generally prepared with the benefit of hindsight. In addition, hypothetical trading does not involve financial risk and no hypothetical trading record can completely account for the impact of financial risk in actual trading. For example, the ability to withstand losses or adhere to a particular trading program in spite of trading losses is material points which can also adversely affect actual trading results. There are numerous other factors related to the markets in general or to the implementation of any specific trading program, which cannot be fully accounted for in the preparation of hypothetical performance, results and all of which can adversely affect actual trading results.

This material has been prepared by a sales or trading employee or agent of Midwest Market Solutions and is, or is in the nature of, a solicitation. This material is not a research report prepared by Midwest Market Solutions's Research Department. By accepting this communication, you agree that you are an experienced user of the futures markets, capable of making independent trading decisions, and agree that you are not, and will not, rely solely on this communication in making trading decisions.
