

# North American Hard Red Spring Wheat Futures and Options

## Largest wheat market in North America

Since its inception in 1881, MGEX has been the principal market for North American Hard Red Spring Wheat (HRSW)—first as a cash market, then futures and options.

Exporters, farmers, millers, grain elevators and speculators from around the globe look to MGEX when they trade HRSW.

Known for its stable and reliable trading environment, MGEX has a reputation as a good place to do business. It offers the liquidity, the product line, and the oversight to ensure fair and accurate trading for participants around the globe.

---

### LARGEST WHEAT CROP IN NORTH AMERICA

HRSW is a one-of-a-kind, high-quality wheat and the second most produced wheat in the U.S.

MGEX North American HRSW futures trade exclusively electronically on the CME Globex® platform. MGEX North American HRSW options trade electronically and by open outcry in the MGEX Exchange Room. The futures contract can be settled by Federal Warehouse Receipt delivery.

#### GROWING SEASON

As its name indicates, HRSW is planted in the spring and harvested in late summer with the September contract representing new crop delivery. In contrast, winter wheat is planted in the fall and harvested in the spring with a July new crop contract.

#### CONTRACT QUALITY REQUIREMENTS

The MGEX North American HRSW contract has the highest minimum protein requirement of 13.5 percent<sup>1</sup>. HRSW is a premium milling quality wheat. It is a favorite of bread flour millers and bakers from around the world when they look to price future wheat needs and manage price risk.

<sup>1</sup>although 13.0 % protein may be delivered at a discount

Other major wheat classes are:

#### HARD RED WINTER WHEAT

The most prominent wheat grown in the U.S. It is often blended with HRSW to produce bread flour. It is harvested in the summer and the new crop month is July.

#### SOFT RED WINTER WHEAT

The third most produced wheat in the U.S. It is used to produce flour for cakes and cookies. It is also harvested in the summer, with July as the new crop month.

**With HRSW exported to over 45 countries, MGEX is truly a global marketplace. The North American HRSW futures and options contract directly impacts countries from Venezuela to Canada and Italy to the Philippines.**

---

## A RISK MANAGEMENT TOOL

North American HRSW futures and options help hedgers manage risk and offer the prospect of profit for speculators willing to assume that risk. Each market participant has a specific objective.

---

North American HRSW futures and options offer:

The **wheat producer** - A method for pricing a crop yet to be produced

The **grain elevators** - Risk management and the opportunity to offer forward pricing to their customers

The **millers and bakers** - A tool to price supplies needed for future flour production

The **speculator** - The prospect of profits

---

Many factors from crop quality to export demand affect the MGEX marketplace. With exposure to price volatility in the marketplace, risk management tools are a must for farmers, traders, millers and end users.

### FUNDAMENTALLY SPEAKING

The MGEX North American HRSW contract has the flexibility to limit the risk inherent to trading commodities. HRSW, like any crop, follows seasonal patterns.

From spring planting to late summer harvest, the market is often driven by the latest crop news on acreage, yields and wheat quality.

When the crop is not in the ground, the market focuses on export demand and international supply

**1. CROP QUALITY** - a cool, wet growing season may increase the chance for crop disease and suppress the wheat's protein potential, thus reducing the amount of quality wheat available for milling. Conversely, a hot and dry summer encourages protein development but potentially reduces yield. Low protein or quality issues with winter wheat will typically increase demand for HRSW.

**2. EXPORTS\*** - Over 45 countries import HRSW each year. In 2012/2013 the top importers were, respectively, Japan, the Philippines, Taiwan, Indonesia and South Korea. The level of worldwide demand strongly influences HRSW futures prices.

\*Source: USDA, FAS, Export Sales "HRS Wheat Exports, 2012/2013 Crop Year"

**3. GOVERNMENT POLICY** - Changes in government policy influence the acreage allocated to various crops in the U.S. For example, a change in policy benefiting corn may shift acres away from wheat or vice versa.

**4. OTHER MARKETS** - Corn, soybean and winter wheat prices often influence the direction of MGEX North American HRSW futures prices. In addition, exchange rates, energy and other commodities can impact wheat supply and demand. For instance, a strong U.S. dollar translates into higher wheat costs overseas, potentially slowing foreign purchases of U.S. wheat.

## HARD RED SPRING WHEAT FACTS

Canada and northern U.S. states are the primary growing regions for HRSW.

It is a favorite of bakers and millers and is typically used in the production of bread, bagels and hard rolls. HRSW is exported to countries around the world in large quantities.

With exposure to price volatility in the marketplace, risk management tools are a must for farmers, traders and millers. MGEX provides all members of the marketplace the tools to manage their risk.

### Spread Opportunities

The MGEX North American HRSW contract is often traded as part of a spread against other wheat contracts. The margin requirements on this spread trade are often lower, but the opportunities may be great.

Prices for all three wheat classes tend to move in the same direction, but each contract moves at its own pace and on its own fundamentals.

MGEX North American HRSW often trades at a premium over other wheat markets because of its quality requirements. The spread has moved in a wide range over the years due to differences in export demand, growing conditions and supplies. In addition, the differing new crop months can create interesting trade opportunities.

### Limited Risk, Unlimited Profit Potential

The flexibility of MGEX North American HRSW options continue to grow in popularity with customers around the globe. For producers, options are an affordable way to ensure the price of a crop. While futures contracts provide protection against volatile price movements by “locking in” desired price levels, options contracts allow hedgers to benefit if prices move in their favor. Furthermore, this protection is provided at a known cost; options buyers never have a margin call.

For speculators, MGEX North American HRSW options offer seasonal volatility opportunities and liquidity to get in and out of positions when needed. For a more detailed look at North American HRSW options, visit the MGEX website at [www.mgex.com](http://www.mgex.com) and download the Futures and Options Workbook. This workbook contains several examples of strategies that capitalize on MGEX options.

For quotes, charts, market commentary and other valuable information on MGEX North American HRSW futures and options, go to [www.mgex.com](http://www.mgex.com).

### Wheat Index Spreads

The deliverable HRSW can be traded against the MGEX wheat index products.

These index products are based on cash elevator bids for the three major wheat classes. They differ from traditional futures and options in that they are traded exclusively electronically and are financially settled with no delivery. A spread trade executed between the HRSW contract and a wheat index contract offers a number of potential strategies and receives favorable margin treatment.

One spread trade strategy is to use futures to create synthetic basis positions, allowing better management of basis risk. Because MGEX wheat index products are highly correlated to their underlying cash markets, basis can be hedged by trading the spread between index futures and their respective deliverable counterparts.

For example, a synthetic long basis position for HRSW can be created by buying MGEX Hard Red Spring Wheat Index (HRSI) futures and selling MGEX North American HRSW futures. To create a synthetic short basis position, one would sell HRSI futures and buy HRSW futures. For more information on agricultural indexes, visit [www.mgex.com](http://www.mgex.com) and download the MGEX Agricultural Index Products brochure.

## Hard Red Spring Wheat **Futures** Contract Specifications

### Trading Hours

Electronic:  
Sunday-Friday: 7:00 p.m. to 7:45 a.m. CT  
Monday-Friday: 8:30 a.m. to 1:30 p.m. CT

### Contract Unit

5,000 bushels

### Ticker Symbol

Electronic: MWE

### Delivery Months

March, May, July, September (New Crop) and December

### Daily Price Limits

\$.60 per bushel or \$3,000 per contract month. No limit for the spot month (limits are subject to change, please refer to the MGEX Rules and Regulations or homepage for current limit information).

### Minimum Price Fluctuation

1/4 cent per bushel or \$12.50 per contract

### Speculative Position Limits

Spot month: 600 contracts  
Single month: 12,000 contracts  
All months: 12,000 contracts

### Deliverable Grades

USDA No. 2 or better Dark Northern or Northern Spring Wheat with a protein content of 13.5% or higher; 13.0%–13.4% protein deliverable at a discount.

### Vomitoxin Level

Deliverable spring wheat may not exceed 2.0 parts per million (ppm) deoxynivalenol (vomitoxin) level.

Vomitoxin levels of 2.0 ppm to 3.0 ppm deliverable at a discount. Levels exceeding 3.0 ppm will not be deliverable.

### Delivery Points

Elevators located in Minneapolis/St. Paul, Red Wing and Duluth/Superior

### Last Trading Day

The business day preceding the fifteenth calendar day of that contract month

### First Notice Day

The last business day of the month preceding the delivery month

### First Delivery Day

The first business day of the delivery month

### Last Notice Day

The last business day preceding the last delivery day

### Last Delivery Day

The seventh business day following the last trading day

## Hard Red Spring Wheat **Options** Contract Specifications

### Trading Hours

Electronic:  
Sunday-Friday: 7:00 p.m. to 7:45 a.m. CT  
Monday-Friday: 8:30 a.m. to 1:30 p.m. CT  
Open Outcry:  
Monday-Friday: 8:30 a.m. to 1:30 p.m. CT

### Underlying Asset

One MGEX Hard Red Spring Wheat futures contract (5,000 bushels)

### Ticker Symbol

Electronic: OMW  
Open Outcry: WP - puts, WC - calls

### Delivery Months

March, May, July, September and December

### Daily Price Limit

\$.60 per bushel or \$3,000 per contract month (same as underlying futures)

### Minimum Price Fluctuation

1/8 cent per bushel or \$6.25 per contract

### Speculative Position Limits

12,000 futures-equivalent contracts in any one month  
12,000 futures-equivalent contracts in all months combined
